*Bare stem valves to be actuated
at a Bray authorized facility.

**Not suitable above 600°F (315°C)

RECOMMENDED VALVE INSTALLATION

Tri Lok recommends that the valve should be installed with the shaft horizontal or at least declined from vertical. This shaft orientation is beneficial to reduce the possibility of solid particles within the media depositing in the bearing areas.

ACTUATOR ORIENTATIONS

← Preferred Flow
stem on the upstream (Pressure Side)

2H
Standard

Valves listed are for maximum protrusion, due to offsets disc may or may not be at 90° angle for this to occur.

"0" indicates no protrusion beyond flange face. Consult your Bray Representative for Sizes and ASME Classes Not Listed.

427	800	5.5	80	28.3	410	56.9	825

NOTES:

(1) Maximum allowable pressure at selected design temperature refers to valve body material. There may be further temperature limitations based on valve trim and application conditions.

(2) Stem - ASTM A564-Type 630 Condition H1150D (17-4 PH) not suitable for use above 600°F (315°C). For services above 600°F (315°C) factory generally suggests use of ASTM A182 F6A Cl 3. For temperatures over 800°F (427°C) please consult factory.

ASTM A351 CF8M

450	842	4.6	67	28.8	420	57.7	837

NOTES:

(1) Maximum allowable pressure at selected design temperature refers to valve body material. There may be further temperature limitations based on valve trim and application conditions.

(2) Stem - ASTM A564-Type 630 Condition H1150D (17-4 PH) not suitable for use above 600°F (315°C). For services above 600°F (315°C) factory generally suggests use of ASTM A182 F6A Cl 3. For temperatures over 842°F (450°C) or under -58°F (50°C) please consult factory.

ASTM A352 LCB PRESSURE TEMPERATURE RATING TABLE

Body Material		Applicable Rating Standard		Material Group		Min Design Temp	
ASTM A352 LCB (2)		ASME B16.34		1.3		-50°F (-46°C)

100	212	17.4	252	45.3	657	90.7	1,315
149	300	15.9	230	44.1	640	87.9	1,275
150	302	15.8	229	43.9	637	87.9	1,275
200	392	13.8	200	42.5	616	85.1	1,234
204	400	13.8	200	42.4	615	84.8	1,230
250	482	12.1	175	40.8	592	81.6	1,184
260	500	11.7	170	40.3	585	81.0	1,175
300	572	10.2	148	38.7	561	77.4	1,123
315	600	9.7	140	37.9	550	76.2	1,105
Refer to Note 3 for material options at temperatures above 600°F (315°C)							
325	617	9.3	135	37.6	545	75.2	1,091
345	650	8.6	125	36.9	535	73.4	1,065

NOTES:

(1) Maximum allowable pressure at selected design temperature refers to valve body material. There may be further temperature limitations based on valve trim and application conditions.

(2) Per ASME B16.34, not to be used over 650°F (345°C).

(3) Stem - ASTM A564-Type 630 Condition H1150D (17-4 PH) not suitable for use above 600°F (315°C). For services above 600°F (315°C) factory generally suggests use of ASTM A182 F6A CI 3.

Examples of Typical Flange to Valve Bolting

When bolting the valve into the line, use standard bolting torque as recommended by applicable piping standards. The valve body seat is independent of the flange bolting. Additional force from the flange bolts is not required. Minimum bolt engagement must be equal to diameter of bolt.

CAUTION: To ensure proper installation refer to appropriate table within this guide for specific valve drilling information.

* Lug Threads may be tapped from both sides and therefore tap may not be continuous.

NOTES:

- Calculations include 2 washers (.2") for thru stud bolts and 1 washer (.1") for hex bolt and stud bolts/nut.
- Any combination of the above fastener types is applicable.
- All nuts are in accordance with ASME B18.2.2 Table 9 Heavy Hex nuts.
- All Studs are in accordance with ASME B18.2.1.
- All Stud and bolt lengths rounded to next 1/4".
- Standard gaskets (0.125"), one per side, have been included in the bolting calculations.
- Please Consult Factory for fields marked "CF".
- All fields with "N/A" indicate where the bolting requirements are not applicable.
